SCREEN MAKING SET UP

PNEUMATIC FABRIC STRETCHING MACHINE

USAGE:

The machine absorbs the advantages of domestic and foreign mesh machine, compact structure, high tension, easy to operate and use, good appearance, is the ideal machine for making large mesh boards such as advertising and professional batch plate making.

STANDARD FEATURES

- Using sprocket, chain, screw drive, so that the stretched net with walking.
- With a number of cylinders to synchronize the mesh to ensure that the mesh fabric, mesh is not deformed, easy to stick the mesh.
- According to the size of the mesh cloth and the size of the mesh frame change the size of the mesh frame, shrink, expand the size of the mesh frame operation, convenient positioning.
- With a small mesh frame can be stretched multiple.
- With chain tensioning mechanism.
- Guide column guide, positioning, to ensure that the mesh parallel displacement, prevent mechanical deformation, protect the silk porch.

PERFORMANCE FEATURES

- The machine adopts worm gear, worm drive gear and gear transmission, so that the stretching process is stepless and synchronous.
- With 4 sprockets synchronously raise the net, to ensure that the mesh is not deformed, easy to stick the net.
- According to the size of the mesh fabric and the size of the mesh frame change the size of the mesh frame. When the size of the frame is reduced or expanded, the operation and positioning are convenient.

TECHNICAL SPECIFICATION	
interior size	1200 x 1500 x 700 mm
Max. working area:	1200 x 1500 mm
Retractable minimum rack	1000 x 1000 mm
Maximum tension of stretched net	35N
